## 

$\qquad$

| as a substitute; indeed, it may be said to lare gualuties of usefuluess and ralue far exceeding the swect potato, when we take into acerunt its long seeping. The Hubbarid iquash you knuw, is of a very dark green color, tapering at both ends, weighing from six to trelse pounds, and hasing a hard acorn shelf whech enonot be cut with a knife. I find a light hatchec in just the thing for cleaviug them apart. This hard, strong shell gives them a deeded advantage over most other squashes for their long keeping, and they are not canily braised Their bearing bubuts, also, are very foir. From fire hills I raised about forty-five squashes this season, and they furmshed me for about six weeks, up to the prescut time, so good a substitute for sweet potatoes, that we have zeitber bought nor desired the foreigo potato siace we commenced using them. Messrs. Editors, on thewhole I thak it is the end of all controversy on the subject of a good squash. <br> H. N. Lavowobtey. Greece, N. Y., Dec. 4, 189s. <br> Grapge-We are indehted to S. N. Horves, Esq., of Syracuse, for a lot of fine grapes in excellent condition. |

| appreciation of its value, energy and persererance, firmness and decision. A coustant effort is necessary to unite wrsdom with discretion, exerting a fantluful watch-care over the heart, to pluck out boxions weeds, aud plant the beantiful flowers whele we may cull from a sioless garden. Educate thyself; for, <br> "Ignorance is the curse of God, <br> Koowledge, the wing wherewth we dy to heaven." <br> Teachers' Institute, Geuesco, N. Y., 18.5 s . Jue E 11. <br> HOW TO READ WITH PROFTT, <br> For the sake of those who are not greatly accus. tomed to systematic reading, we make some suggestions as to the best mode of reading, so as to gain the lighest adrautage from the bouks you pernse. <br> 1. Ascertain the aim of the author. You will |  <br> The New Aspbran Crclopedta: A Popular Dictionary of General Knowledge. Edited by George RirLfy and Ciras. A Dasia. Yol. IV. (BrownsonChartres.) New York: D. Appleton \& Co, <br> Trus volume bas been examined with great interest Its 766 pages contain 2,900 articles-blograplacal, scientife, historical, religlous, mibtary, geographical, political, de.- neluding impartal and ably written aecounts of seraral emment American atatesmen, such as Bechasan, Cags and Caldorn. The articles on countries arc full and admarable - that on Canada occupsing neurly seventem pages, and being very correct. Calsfurama and the ('arolnas are admarably skelched, Of ctifes, accounts are guen of Brussels, ('rleutia, Couro Codiz, Cawnpore, and athers. Most of the important Caper, Prom Crpe North to Cape Horn, are given, with moth wther geographical information. The artieles on Cavalry and Caunon-as well as those on the batise of Buena Vista, Oerro Gordie Chapultepec, \&c.,-are very complete and will trine all miflary men, Amons | The Stratrord Gallbikr or, The Shakspeare Sisterhond: Comprising forts-flve ldeal Portraits, described by Hesrietta Lee palagre. Musifuted with the engravings on stech, from deyigns by eminent hands. Now York : D. $\Delta$ ppleton \& Co. -1 ss9. <br> This is a charming Gift-Book-even superior to what we anticipated on andouncing it favorably, after examange a specimen sheet and portrati, in few weeks since. In the language of an able contemporary, "wo have had various and elaborate commentaries on Siabigparare, but this clegant book is a pleturesquc presentation of a woman's idea of the women of the great dramatist. Freshness and benuty are not the only or the chief altractions of the partraits, They are the idea that the drama develop, - bat it require of such a mnater, and this is happily done in tho work befire us." The Gathery is rich externally, as well as internally. The binding - antique morocco, gilt-is clegant, while the paper, typography, sece, cotoprise all that is requistie to reader the volume a superb gif-book and permanent ornavent, All admirers of the great |

## AWAKERNDV THOUOHT.- A SRETCH.

 Owr clear and frosty moroing in December, 1854, Yorls, my friend G -- and myelf were strollingalong, commentiog on varlous topics of interoot along, commenting on various topics of interost
that suggested themselves, when an object in tho that suggested themselves, when an object in tho
glittering landscape attracted our aftention and grew forth our admiration by its boldvess an
grandeur. To me it appeared nothing more than
cliff, lofy and majestic. his thoughts in glowing language and etriksing
similes--portraying its beauty and the silent lesson it there tanght. Speakiug of other things, he said:
"I can see beanty in everythiog around-the erisp snow beneath our feet-the leatlesa tree by the
roadside-the jutting cliff on the hillside, nod the sun flooding the vale with his golden light, but sum dooding the vnle with wis golden light, but,
revenl the inimituble benaties of nature. Frank,"
said he, "there is untold beauties crerywhero dis. played, if we will but behold them."

| ANECDOTES OF WLLD GEESE. - NO. I <br> Ir is with feclings of the utmost delicacy, that I prepare the following facts for publication, knowing that by many they will be looked upon as a hoax, and without the reader is acquainted, or wishes to become so, with the babits of wild geese, I vill advise him to read no further. <br> All who have had muck experience in life know of incidente which they would not like to see in print with their orn signature attached -and why? For the renson that they seem so very improbable the reading public would not believe-and we might suffer for baving exposed facts that were never before known, and migbt not be obserped again. But, those who are interested in what my article treats of, if they have ever had like experience, or anything hikeit, I hope will make it known in a similar manner ns myself, and gratify at least one lover and breeder of this peculiar bird. <br> For ten years a pair of wild geese and their young (most of which I early disposed of) have occupied a pond adjacent to my house, which would alway 4 quiclly come to the call of my whistle, and many an hour have I spent in their company, studying their babits. In winter, when | Which be lad visited cre the unkiud hand of the hunter pinioned his wing, and he it was that instilled into her soul the jojous hope that time would heal their deformity, and together, on the wings of love, they might journey untired to her fancied land. Such thoughts ns these, if my acquaintance with them has taught me rightly, and many otbers, an instant's space more then sufficed to impress her memory, and as she bebeld hor truant busband leave their former happy isle and convey the spoiler of her happiness to otber familiar places, nad felt herself by him unnoticed as a thing that were not, she cried aloud in hearb-breaking agony-bettor thad my existence do I love thee and now I know thou care not for me-on thy head be my suicide, for I dic-and, pressing her head under toater and reclining on her side and back, with but little perceptible flutter, ero my friend (who cried, "she will drown herself") could edter a ready boat and reach ber, life coas extinct. Well, we kuew she had died of a broken heart; and to be sure nothing niled her, we made a careful external and internal examination and found all ns it should be What I lave related istrueh and can be proved, and I consider this incident of constancy and affection worthy of record. <br> Dedham, Mrlse, 1859. <br> E. V. K. |

VOL. X. NO. 12.

Moore's Rural new-yorker,
 With an Ablo Corps of Assigtants and Contributore

NQUIRIES AND NOTES.

| nothing about this. I soon found that mume would fill once in twenty-fon hours. I found myself in a finc fix, and was obhiged to go thirty rods, plug up my feed jufe and draw on the water in the air chamber every day. Thes was worse than any I had becomo acquaiuted with. It appears they generally rum from a week to is month. My ram had run buta few duss when the supphy-pipe began to burst - when the vent was very small, it "ould run without filling up, but would soon get so large that it would stop running. After bursting and being mended five or six times, with the same results, in about two years I was obliged to abunden at. <br> Alter the ram had lain useless part of the last sengon, in the month of October, I went to an mon works, nud there found a wrought iron pipe of the proper size, aud got thrty feet ; cost enght nud onehalf duttars, (the exprose in the hist place was about haty dollars.) The ron ppe is what is called gas pape, and is an preces ubout twelve feet long, courceted by a socket nut. I ladd down thas prpe mimedately ufter gethog it, aud it has ruu now some four months. The fillug up can be obriated by mak, ng a rent in the feed-pupe near the ram, but this ta au impediment to the run of the ram, especially where the heal is not mure than two or three feet. Let us hear from all your correspon- <br> usually be in this section the latter part of Aprit. Frost will not injure the onjon. The cost of taking cnre of an acre of obions depends much upon the condition of the soil for cleanliness, and the general management, so that we will not evengive n guess there at. The average product of authe of onions is from 150 to 200 barrels, and we thiuk they uever sell for less than \&1 per barrel jn New York, and generally for more than double thas price. They aro now worth about $\$ 3$. If well harvested, and kept in a very dry cellar, or in an upper room where they will not freeze hard, they will keep well untul warm weather. <br> THE TEST CHESS EXPERIMENT. <br> Ed. Rural New-Yorker-Dear Sit: As you have from the first taken a deep interest in this Experiment, and are well acquainted with all the parties, it is due to you to make a brief statement of the case and its result, as reported to the State Agricultural Society by the Committee. <br> It is not an uncomtion opinion among our furmers, thut Wheat, somo in the fatl, espectally in wet situations, will be clanged by being winterhalled, or by some unknowa cause, into Cbess.Such an ophnion is not known to exist, in the wheat-growing comutres of England, France, Ger- |  |

## WH0 INVESTS IN THE ס. s. FUNDS

|  of the Siub-Treasury in Neiv York. We quote a passage which will be read with interest by the peneral reader <br> Not the lenst curious desk in the sub-treasury 13 that of the clerk who pays the interest on the pub- lic debt. The coupons and interest on about seren-eighths of the debt of the United States are paid out of the sub-treasury in New York. The balance is in the shape of an inseribed debt, on Whach the interest is payable to the parties whose oanmes are entered on the great rolls at Washing- | released from the band, and return with it to its keeper. The fulcon was generally blinded until the game appeared in sight, by haring the head covered with a leather hood. This hood was remored wheo the game appeared in sight, and the bird which was taught to perch upon the wrist was ummediately released to commence the chase, while the spectators looked on in the greatest excitement, cheering the falcon by varions well known signals. <br> In the Enst, this pastime is still to some extent, pursued, and the Persians are particularly skilful in traiding falcons. They hawk after att kinas of ir audeven after gazelles. Tbe fulcons are taught to fas- | on to the borth. They hide under the bushes, and will not rise on the wing unless forced to do so by a dog, or by the hunter himself. I was surprised to see how quickly and surely the hitte hawk selod of the bird. I do not know whether or not the Jews in ancieat days were acquainted with falconry, but David complains that Saul hunted for his blood as one doth hunt for a partridge in the mountains; and this lunting of the same bird on these mountains, and givang their blood to the persecuted sou of Jesse." |
| :---: | :---: | :---: |
| ton Every six months the names of the parties are written out in a book at Washington and seut here to serve as a gude to the sub-treasurer | ings in the Lands of our gorernment ; and Lord | atistied with these delicacies, pou will fud conve ient a cut of ronst dog, cat or rat. Do you not |

COUNTRY AND CTTY BOYS

## Messrs. Ens, :-In the last number of the Ruadr

 Mrssrs. Ens, :-In the last number of the Ruaaz,under the heading which I bave chosen for this
article, "Unas" describes, and very justly lasbes, a loafsh class of boys" to be found in every city and to some extent also in every country village.
have nothing to say in defence of the conduct spoken of-on the contrary, $X$ am glad to see th

|  |  <br> In an easy flowing styla. <br> Poetry by Miss Hezard. <br> - <br> Earih hath no jog unmuxed with pain; <br> FEEDING calves. <br>  <br> AN OUT - DOOR CELLAR Mensbs. Ens.:-I noticed a letter from one of o build an ouldoor cellar where be could not dig. My father made one last fall and I will describe it ers. We first laid up the frame of logs and built a sloping wasl around th, out about three feet at the bottom and sloping to witha eighteen inches at the top. Filliod in with dirt between the logs and the wail, Filling the cracks with straw to seep the dirt from running in. Then we ladd a lon across for the middle of the roof to rest ou add lud sticks acrose it. Then put atraw and covered thick with dirt- doors this made us a good warm cel. LETTERS FROM A HONGARIAN.

$\qquad$

|  accompanying view and description of the Falle of Regla, near which are extensive worls for extracting gilver from the ore: <br> "The Patio, or open yard of the Regla, on which the principal portion of the ores of the Real del Monte company are 'benefited,' or, as we should say, extracted, is situated deep down in a barranco, where both water-power and intense heat can be obtained to facilitate the process of separation. The immonse amount of mason-worls here expended in the erection of massive walls, would make an imposing appearance if they had been built ap in the opea plain; but here they aro so orershadowed by the mason-work of naturs, that they siok into insignificance, in comparison. The bank, some tro hundred feet bigh, of solid rock, as it approaches the waterfall on either side, bas the appearance of being supported by natural buttresses | of basaltic columas-columng closely joined together and placed erect by formal, had the sides of the barranca been lined only with perpendicular columas ; but broken and displaced pillars are piled in every conceivable position against the frout, while a vine with brilLant leaves bad run to every fissure, and spread itself out to enjoy the sunshine. The little etream that had burst its way through fres uprigat fell into o and flowed over the broken fragments perfect basin of basalt, heigbtening immensely the atiractions of the spot. I sat down upou a fallen columa, and for a long time continued to contemplate the unexpected scene, of whicb, at that time, I had read nothiog. There was such a mingling of the rich regetation of the 'hot country' with the rocky ornaments of this pretty waterfall, that I could nover grow weary of admiring the combined grandeur and beauty of the place." |
| :---: | :---: |
| will say, - enough about Vienns, too. I will not, therefore. trouble you with a description of what other things I saw in and about the Austrian capital. But before quithog it, let me speak of but one spot more which is the pride of Vienna-the Prater, in the suburb Leopoldstadk. This is the promenade of the aristocracy as well as of the peo ple. I don't know how I can better describe it, than by comparing it to an immense outspread fan, the allerss runnigg north, east and south far into the country and concentrating at the so called "Praterst(cn" (star) at the end of the Jagerzeite the most fastionable street of Vienna. The principal alley is near a league in lengtb, and is studded with several places of refreshment. The several alleys, of which there are five, are separated by green meadows, groups of trecs, and in the more remoto portions by little woods frequented by wild game. Here, then, I stralled about ono Sunday afternoon, at which the more natural vehicles (leg $3_{3}$ ) of the poorer classes roamed about in rast numbers; thougb, as my companion told me, by no means to be com- pared with what at formerly was, when the numerous rallrouds traversing in various directions, Lad not as set offered such cheap faclities for making excursions suto the country. Wappening to be in Vienaa on the anniversary of the burth-day of the present Emperor, I witacssed a grand pyrotechnic display given to the public on one of the alieys of this Pruter, accompanued by masic from ouc of the ing of nusic, I cannot help remarking that the mulitary music of the Austrians is the most de- lightiful $I$ ever beard - far surphassing that of any | sand three bundred milcs. Lient. Habershame esti- mates that the waters of tho Yangtesc-Kiang carry along in suspension the remarkable quantity of tharty-tbree per cent, of sedimedtary matter. Ac mud is hourly transported to the sea by this river It secms quite incredible, but as the carthy matter at its mouth, giring to them the name of the Yelmust be rery large. The Yangtese-Kiang bi ever, bears no better comparison to the Amazon than, uccording to Leut. Habersham, the Missis sippi does to the Chinese river. The Amezon Which is the largeat river in the workd, is on thousand seven hundred and sixty-nine miles in nearly four thousand miles, while four hundred miles from the Atlantic it is raore than a mile in per hour, and in mid-currents no bottom is found within twenty fathoms, or one hundred and twenty mated to afford fifty thousand miles of inland navi gation. |

cordice, which is sioply the corering tion of some Grecian or other model, is not as good suflicicnt to protect itselff from a driving storm, to
sult

The verge - board, or drapery, is a device for wall gablea, or dormer windows, is very appropriand can be made quite ornamental at an amall
$\qquad$fosible to mako a good looking cornice without a
facis nnd crown mouldug. For the latter a sim-and below is better than a compound woulding, aslass.
Plate, in the cornice, or hung up under the ends of
he sbingles. The frst is the best and cheapeat?all, being tusightly and troublesome.
Falleys can be made tight nod durable by ubing
scparate shects of roofing tin bent into the angle
and lnid one above the other with a lap of about
two inches, -commence at the bottom nud nail the
wo upper -corncrsace only. Shingle down on the this

| better adapted to cornices of a greater projection, ns it gives support to the entire soffit. The upper corner is pherced and the lower side cut away to make it light, yet not weak, and the curve, which should not exceed one-fourth of a circle, (or balf a gothic arch, appears very graceful, particularly when seen from a distance. The lower member or foot should terminate against the building, and not flnish with a "quirk," sled-runner fashion, as if it was designed to slide down the side of the building. A portion of the upper part of the brackets should run into the building and fasten to the studs, or bond timber, and the reat of the cornico be built upon them, instead of being saspended dangling from the soffit. It scems that that style of bracket which not only looks as if it supported the projection, but really does so, and gracefully, and mhich is susceptible of any degree of ornamentation, must be the typo of the best brnckel that can ever be invented; and if so what can tue conglomeration of curves, 0 . G.'s sud fillets, bollows, rounds and beads, londed down with drops, balls and pendants, devised by American architects and Yankee "inventive genius," and pinned up under their cor- |

N, Y. <br> Foa Tanma and otber partuculara see last "ase. <br> NEW YORK STATE FAIR. <br> EVENLAG DISCUSBIONE. <br> A veby creditable desire was blown by the farmers in ottendance at the State Farr to improve every moment; and notwibstudang all were weary with the labora of the day, the evenug discuasions were well attended. The lorge and benutiful Lecture Room of the State Agricultural Society, was literally crowded until nearig ten o'clock cacla erening. We did not reach $\Delta$ llbany in time for the discussiun of Tuasday, but 1000 full notes of what waq paid on Wednesday and Thursday eveningg. We bave only room for our ping, and so the next sumber will give that for Thursdoy, and perhaps a fer sugqestions as to the best way to render Agricultural Discussions interestugg and profituble. <br> Ar the suggestion of Hon. guc. Paters, of Chaif. Mr. Paters announced the subbject proposed for discussion as Hanures, and the Best Noden of $A_{\text {Fply ing them, and remarked that this }}$ Hras a very important question, for many farmere Lad learned that they could not grow crops without manures, and othors mere fast learniog this Important lesson, whereupon, Wr. Phisys, of Onoodag, spnke of bis system. He used from 20 to 25 loads to the acre. $\Delta$ pplg it as practicablo. Takes long, drippiog manure from the bara-yard, apreads it on the land, plows under, and plants coru-next year barley, and next Wheat. The Mr. P. could lire by such in sybtem if be employed a man to do the work. To which he replied that be commedced with notbiog, bad paid for his form, nod had a little money left to expend in attending the State Fair. <br> Mf. Winiaak, of Cajuga, thought manure ahould be plowed under, as a general rule, but had found <br> Wbeal <br> Mr. Nosmby, of Onondaga, had learoed much about manures and thair mavagement from Jous Jomsasos, of Geneva, and bad, in the maid, sdopted his mode. Stabled hie stock, and made the most of the manure. Drew it to the felds in the wiater direotly from the atable, and threw it on the snow. It ihis way did not have to draw as though it had lain soakiog until spriog-drawing does aot cut up the land, and the work is doae al a leisure time. As soon as the ground was ready, pion is in ligaty. In this way as mellow as an ast heap. <br> Mr. Perrens said he differed with some gentlemen in regard to the application of manure. He inches or so and the rools of plants would bave dificulty in onding it, The secoad time of plowkg ho would plow deep, so as to taderich the manare between the tro plowinge. Nature applied her manore on the surface, and she had sagde e wite provision for an annual maduring. Its experseace whas that manure placed on or Dear the Lswte F. Allas, of Black Rock, said any geveral rule for the application of maoure will prore a falleg. One asatem will not do forall soiln. Ciay soll relyine mapareas if doce water, and it remain | dormant ualess it can come near the surface. His Surm was morty in grass, and be apphed mataure in September sod October, on the aurface, Its eflect on the growng grass can be secu for half a mile. If mabure is appied in the spring it is lifted up by the growiog grass, cloge the muchine, and its full bentelt is not gamed untal the following year. A good way of manuring is to put slieep dow to the roots. Hud one meadow, giving fiae crops, that bad never been plowed eince the creation, and of course if had received no other than surface manuring. <br> was called a buogry or leacby soil. Plowed manure in just as it came from the barn, and deep. Tost which did not decompose the firat year was He did not believe in the leaching of monure Manure water poured on b barrel of saud would leach through pure water. He did not, ettber, Mr. Aus inc fall pasturing, as recommended by <br> Mr. Wineaar, in reply to the remarles of Mr. Pafers, that nature had placed manure on the surface, baid that pature did no plowtag. The greatest difficulty with bim was to get the manure under. Had no fears of getting it too deep. A. Goldsuits, of Orange counts, anid inorgnnic manures may be spread on the surface without loss, in fact they would be likely to gain ammonia from the atmonphere. <br> Mr. Colliss, of Lewis county, bad a piece of Jand whoh had been in grass over fifty jeara. It now produced over ibree tons to the sits, of The effect of surface mantruring on the grass could be seen for five years. Mr. Marks, of Oonondage, wes first tauglit that maoure sbould be plowed ia, but often saw no good effects from the manure he used. Now he composted in the gard, and drew to the fielda in September or Octuber, and applied on the surface Some years ago be had resolved never to plow under manure agas $a$, butlast apring deviated from this parpose, and well plowed under twenty cords per acre, and planted corn; the crop is ant much better than where no manure was used. He would never bury manare again, as be invariably got the best results from surface manuring. $\qquad$ manare. Was so particnar to lave it covered, tbat if be dre manare to his fieds in the wioter, be covered the piles with swamp muck. Ohtained bushels of corn to the acre the year before-manured it heavy with stable mavure, plowed it under deep, and the first year got eighty bushels sbelled cors to the acre. The suil is a olay loam, north of the village of Lyons. Mr. Gedpes, of Ooondsga, said such esperiments as that stated by Mr. Sy legestbr were apt fulead to deep, broked up the subsoil, which perhaps lu.d sot been done before, and this, in adhation to ib Mr. Mames, of his county, who taught bua by ex ample to put manure on the surface, but Jons Jonsston was the first man who bad the boldnesa to jecommend such a course in print. The objec to be sought in maturing is to make the grass greatly curich the soif. Mr. G. found manure to pas better apon gruss and wheat than upon auy other crops. Apsly manure upon whent as a top dressing, in the full or early in tho winter, and it wall remain green as a meadow through the winter; even upon knalls where the now wh to this, and he expressed fears that it would not stand through, but bis fears were groundless. In been the cause of the thrift of his mhent, Mr. G. said that all bis wheat was drilled, and only e part top-dressed, and this part showed the vipor thro' winter, of which be apoke. Mr. G. inquired of farmers present, whether they bad ever derived any benefit from the use of plaster before the attention to this subject, as bis experience was that plaster required the leaf to operate upon. Mr. Cayster, of Ulster, had found manure ap plied in all ways beneficial-the question, and a apply it. Mr. O. generally plowed siz or aeven inches deep, and then harrowed. Farm, a sandy loam; brought manure from the city. Always used composted manure; had tried coarse manure and foand it far less profitable than that which produce botter resulte than a large dressing plowed or dragged in. hast year plowed in manure, and Would, had it beeu used jo the hill. Never let land lie in grass for a series of yeary-could not be | aetisted with a amall crop-broko it up, maoured, and mado it produce sbundantly. al. F. Alben said graziog land in Kentucky that Was pever ploved, was worth from $\$ 100$ to $\$ 170$ per acre, and would kerp a bullock to the acre. The acre, and would kerp a bullock to the acre. The catte was fed upon it, and that was sll the manure the land got From these lands came the fine Kentucky catule to the New York mariet. Some tucae since Mr. A. spent a day at Mr. Patierson's furm in haryland. When be came ib possession of it, it was poor, worn out lend, not worth $\$ 5$ an acre. Mr. P. bought lime-atone land, made lime, and ecattered it over his poor soil, untul it looked as though it had been visited by a snow storm. now this had produced 21/3 tons of hay to the acre A. J. Fisa of Herkimer, owned a furm 800 feet sbove the Sobawk, on the south side. When lie came in possession of it, it was very poor-could not make grass grow. The hard problom with bim was, baw to commence to improve. Lie plowed, planted to corn, and manured in the bull with artiticial manure. Fed the coro and stalko to cons, carefully saved all the manure, and drew mixed with the soil. Mavure itself will not grow plants, nor will poor soll, but when both are well may be expucted. He plowed deep and then sowed clover, which succeeded, and the diliculty Wea then overcome. Now th申 product of has farm was four times what it why trenty years ago, Then twenty fire head of catte was all the farm Would support; now be kep. sixty, and all done vith mopure produced npy the farm, with the vith mopure produced npg the farm, with the Mr. Bartlett of Dutcbess, made a good deal of mauure by atabligg bis cattle. Would recornwith advantuge. Whererer he noticed a poor knoll, or a ponr spot anywhere on his farm, as at the proper time applied madure liberally to weak lumb, jo the as bo would notice and gurse s A Goinamity of Orange, suid all farmers know that laod can be kept in grassa a luyg the but great majority, be ibnuglat, conaidered it a very top dressing from year to yeur, fine grass was produced. Then he advied that it be plowed under, so as to enrich the suil. Wr astoustied to bear aoy one say that manure could be aprilied other crops. Cord mould grotivin a manare beap und no erop was more benethed by toaduriog manuring cora was to draw out the manure in the fall and flow it under ut the spring $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ <br> the tubark, aud the follen leuves from the roods, in the barngard. Toia soon made manure, and Wus placed upon corn land. Thes was the way ihe farmers of Catekill commenced to enrach their laud. <br> Mr. Pexprs thought be might aid Mr. Robinson io his effort to mate the "desert blossom as the rose," by giviog a brief statement of a case of improvement in Genesse county. There was a strenk of poor land lying soutb of his reaideace, Bo vory poor that it would not grow grass. A number of years since a German bought three acres of thas land. He sunk an old barrel, and into it was emptied all the ulops from the honse When it became ktrong it was placed over a pronll piece of laud, and the barrel was refillen. In this planted with cabbage plants, and these, as they the barrel. The result was a very great crop of cabbage. These were fed to a cow, all the alock the owner kept, and the manure applied to the eariched. That three acre farm bad grown into finty acres as good land as there was in Genesee county <br> A. B. Congar, President of the State Agriculhad Society, baid he regretted that the discussion had not been a little more plilosophical. There wes some good in all that had been said, but there were principles well settled in agricultural philosophy which might account for the different expe- riences of the apeakers. It had been settled in Eogland that nitrogenous manures were the best for grasses, and phosphatio manures for leguminons plants. Fermenting manures had been talked | about. Fermentatiod was the process of decotopo situoo; it was anuther word tor dissipation. Uoless madure. On the beat mode of applyng. tbere was but one rule. The maiure tras for the benefit of the roots, and should be placed where it can rising wes not to talk binself, but to iotroduce a furner from Musauchusets, the Hod. Jorian Quincy, Jr., who bad bad great success in soltug, and could impart raluable information on that subject. <br> Mr. Qoincy ssid be would make but a bimple staterent of his practice, Owned a farm thut twenty sears ago produced oaly tweoty tuns of bar; ;ow it gave him every jear thres lundred. This improvement was effected by the iatroductons of the Eoghash system of soiling. The saving of feociug by this aysicm would be imnense. On one hundred acres he had not an interior fence. Farmers do not appreciate the value of cow maMr. Dasa, a chemiet, and author of the Mruck Jfanual. He wes chemist to tbe manufacturer of Lowell, sad cow manure was tbe ouly thing tnown that sould set culors, until Mr. Dava, by studying the composition of com nuture, ditecovered the principle an the manure so neceysury to be obtained io a better uod cheaper way. A cow Will produce about $31 / 2$ cords of soldd manure in a cords of the solid. If dry muck was ased in the stables, this quantity would be increased three fold, makigg at about 20 cords a year to each cow. Such manure, withun five or eight miles of Boston, was worth from 85 to 88 per cord. Frout these gigures, be bad come to the conctusion that, the but, for fear be was orer estututiog ita ralue, be subarted the questione to mr. Dasa, who had givea perthaps uore time and study to the suljuct than any other man, and Mr. D. prowounced hus he mould state that the ruaume of a cow was a have not yet learned bow much can be done on. Ittle lad. The laws of Frauce divide the farm ure in that country ${ }^{2} 70$, non furcans leas than the acres each. The farnuers of this conutry bhould divide ther farme with their soas, instana of bending then West, nad grow a large unount of produce on a sasult breadth of laud, and great good would result to both old and young. CURING, SMOKLNG AND KEEPRNG HAMS, $\qquad$ Eda, Rural Nbw.Yonker: Having seea in Creek, Erre Co, Pas, requestiog sone one to seud smoked, perunt tale to hive you any ex, wetcoce for the bencitit of C. I. S., and jour readers in general. $\qquad$ salt or mould on the grain. I thent thed kecpmex them in pounded chatcoal with no better cillect. I uext tried dry ashes, but uuleas the batus were very dry when put up they would taste of the ashes. I then tied sewrog thetr up in coarse as I bad seen them in that condition in market; but they did not seep well-wauld cither mould or the lime would crack and the flies get in. <br> For a oumber of yenrs 1 have adopted a vew free from mould or fles. I prepare a sach for each ham. A yard square of good sbeeting is sufficient and before any fliea hare infected theow, $I$ put them up, one in a sack. I take sweet bay and cut it (tn aculting-box) about one inch long, and bil in to touch the bag. Tie a cord around the open end and hang them up in the smoke-house or some cool, dry place, and they can be kept any leagth of time; the bag and hay will keep arfuy the flies and allow the moisture to escape so they will not mould. <br> Hame should always be woll cured before thes are smoked. I have seen several gnod recipes in the Rvial, for curing hems. The following is my method, and I have ofen been asked how I could reep them through the summer and have them of so fioe a flavor: <br> Recipe for Cumse Haks - To one gallod of Water take one and in hall pourds of good salt, one to be increased in this ratio to any quantity fequired to cover tho hams. hs soon as your pork is cold cut out the hame and puct them elosely in your eask. Sprinkle each leger lighty with fan | sait - put on a weight and pour on the brime immedately, and bufore the juice of the ham has for the sult to strike through, according to the sise of the bams. It will be decessucy perhaps to add they are very lurge, they absort eo much of the salt ath to loave the oriae so weak it rany gour. It beun in enol so tako them up arter they have necessary add a little thore salt. Great care should bo taken not to eals too much, es by doing so you lose the flaver of the hens, and bat just absorbs the gult from the bripe it abould be fed by adding a littie salt on the top and the humes should be well struck througb. Whea the hans are large bone with a chosel, leaving alwags the large bone. Hore never have fatcd to kecp bams anee you my metbod fur Caring and Keeprigg Hams, let me add my plun for n Smoke Ilouse. No farme sbould be without a good smokebouse, and such from theres. Fifly hums can be sroked at one 6 by 7 , and is large enough for most farmers. I first fug all the ground out below where the frost Would reach, and filed it up to the eurface with mortar. The ralls are brict, eighe juches thick and seren feet higl, with a door on one side two lraed with steet iron. For the top I put on joice 2 by 4 , aet up edgewise and $81 / 5$ factes from cen beary coat of mortar. I built a stonll chmoney on the top in the center, arching at over and covering it wht a shomele roof in the usua! may. An arch should be buiti on the outside, with a small iron bole from the aret through the wull of the smokehouse and un srod grate over it. This arch is In than to build a fire inside the smoke bouse, and the chimen caures a dratt through into the smoke-house. Good corn cubs or biekory wood The cost of such a smoke-bouse as I bave deAlisx. Brooms. Fachenviltr, Tloga Co, N. Y., Och, 1859 . <br> ABOUT WATER PLPE. <br> Eng. RTMar Nem- Fohser - Io gour insme of Le bad made, said pipe being coustructed of ment and drans blle, which I coocluded was the pipe. I bud over susly rods of wooden pipe-laid duwn in the summer of $18: 5$, wheh fased the past sumpuer, and being, part of the way, from rery duficult to fud the lens, I concluded to put down a ceurent pipe that would not rot in five cumposed of ope bushel of lime to three of ciean and four inches wide, nailed abt three feet long end, leaving the sides four incbes afart. For the otber end I took a picce of atake iron, bent it to a the end, makiog it of the anme width, or a wider. I then put may box in the ditch, plastered the bottom abunt a half inch deep Fith mortar, the sides and over top, and then drew thé box along, again going through the process, fitting the tile as closely togetber as posslble. It bardnduced to let the water in about three weeks from enough, the water sweats through in some places, and there were pome anall holes where the cement was not closcd together. Tue lutter I could casily plaster. Were I to do the sime job again, I would and let it stand Ave or six Weeks before letting in the water. <br> to auswer to the inquiry of H. T. B.,-"Should the dirt be put on to the mortar imwediatey, or mine I corcred it lightly imonediately, part I len untul the water was iet in, and part, which was on low ground, was covered with wator facs no difference. The one appeared to barden as fast an the others. To ble yecond inquary, I would say, If the bottom of jour ditch is soft, secuove all the sof muck and 611 it with earth that is betier, or leying cement pipe, it should be so deep that the |

 atmospheric statea and cooditions whicb directly with the Cbart of Temperature nod Climate, given
above, we condenee from the " O Geogrophy" the following list of causes for these
variations, the full comprebeosion of which will the heat rellected from the surface of the earth
We We may travel several hundred milles from the of the earth, before we become sensible of a dimin
of ald Ished temperature; but the moment we begin to
increase our elevation, a rapid change of terapers. ture is experienced, until we arrive at a point
where constant frost prevails.
The ratio of the dimmoution of temperature usuThe ratio of the dimnoution of temperature usu-
silly given, is $1^{\circ}$ for 300 feet of heigbt; $2^{\circ}$ for 595
feet $3^{\circ}$ for 879 feat. $4^{\prime}$ for 124 feet $5^{\circ}$ for 1347 feet; and $6^{\circ}$ for 1,559 feet. In the temperate
zong generally, if one site is a thousand yards
bigber than another adjoining, it wrill have a oli-
mate $12^{\circ}$ colder. and the higher the latitude the mate $12^{\circ}$ colder; and the higher the latitude the
lower the snow hine becomes, till it meets the surface of the earth in the frigid zone.
The nearness to, or romoteness on a country from,
the sca, is an importast element in determiang its

| chmato. The ocean preserves a much more uniform teroperature than the land, far lower than its extreme of beat, and bigher than its extreme cold. The winds that sweep over at hare this character to some extent impressed upon them, and communicate it to the countries over which they range. Hence islands and maritime districts have milder climates than inland regions ander the same parallel of latitude,-the currents from the ocean tempering their summer heat, and moderating their winter cold. <br> The slope of a country, or the aspect it presente to | of the soil. One soil acquires beat, kee ecquired heat much longer, or radiates it readly than avother. All the varieties of light and opea, vegetabla molds, gravell roeby tracts, stid], wet clays, and sandy pla bave, it can wot be questooned, their d powers of radation and absorption ; and w a district be clay or savd, bare or covered vegetation, for a like cause, greantly affects $1 t$ |

talents, industry must improve them; if you bure deficiency. Nothing is denied to well-directed abor; nothing is to be obtained without it. Evit men speak what they wish rather th

| The degree of cultivation and innprovemont lich a conntry has arrired. The clearing forests, the draluing of swamps and tanshes, the cultivation of the soil, etc., are among the operations of man by which the climate of a country is greatly modified and improved. The clearing of a country from trees bas the effect of raising the mean ansual temperature, but at the same time greater extremes of heat and cold are introduced Open grounds are always frozen deeper than woodlands, but the latter retan the suow and ice of Winter much later in the spriog than the former. The precalent winds of a country constutute another cause wbich affects its chmate. In the United States the winds from the north are usually noted for their coolness, a property they derive in the frozen regions of Hudsou and Baffia Bays, while these from the soutb, comiog from tho Gulf of Mexico, impart a mildness throughout the whole country. The comparatively mild cllmate of the British Isles is owing to the prevalence of westerly wivds, which are warmed by sweeping over the region of the Gulf Stream. In Venezuela, the lemperature, which is from $5 f^{\circ}$ to $30^{\circ}$ in Marcb, rises to $1 n 4^{2}$ or 105, " wheuever the wind blows from the parched surface of the Llanos or great plains. The annual quantity of rain that fulls in a country conoderably affects its climate by impart$\log$ a greater or less degree of humidity or damp. dess to the atmosphere. Io geteral, more rain dotricts, among mountuins than in lerel regions, and within the tropics tbas iu the other zones; the great heat which prevaits in the equatornal mucl greater thas in begher latitudes, and hence the atnossphere becumes loaded with a greater quanitity of monsture. |

reared in the city. Two yeare ago $I$ exohanged the noise und bustle of your bues streeto for the
atilloess and beallthulneas of the country, this time perbaps I am able by experiencos io sponk righuy in regard to the desirableneas of liff in the
Rural districts over thas of a lifo in tho True, you have adrantages and privileges whioh we are to a great messure doprived of. Yoar school, churcb, and social privileges are greater. Your opportunites for knowing the current news of the day in regard to events which are taking
place in the political, moral and social somewhat poore exteraive. But in worlds, aro somemaat more extensive. But, on the other
hand, jou are not perioitted to breathe the heslth.giving atnosphere by which wo are so bountifully surrounded. You cannot rise in the roorning sud cast your eyes upon green felds,
waring graio, and a glorious sun-rise. You cannot view the glorious works of Nature, and look
through them up to Naturo's God, so freely through them up to Naturo's God, so freoly and
cheerfully as we can who are constantly surround ed by them. And the labors of a Farmer are so Varied, pleasant, and health and streogth impart-
ing. With these considerations alone in view, lifo in the country is, in my estimation, by far the
most desirable. I have tried both, and this is the most desirable. I have tried both, sud this is the
conclusion I have arrived at. I bave chosen for life the Fsrmer's vocation, and ain to be the only one of the young men of your city who shall leave off lookiog to mercantile and professional pursuits for a livelthood, and instead,
to become tullers of the soll to become tullers of the soll? How strange it is,
since roercautle pursults are sa precarious and since reercantlue pursuits are so precarious, and
the professions are so crammed full, that young the professions are so crammed full, that young
men will still contunue to squeeze themselves into the same ranks, when there is hardly room for
another one. How few succedin nequimng welth in mercantule parsuits. How ferw lawyers and even get a good hring. The Science of Agrioulsense of the word,) offers heulth, wealth, and be To all who stand at the degk or bebind the coun ter, suffering with headache and dyspepsia, let me
say, leave the shop or the office and start for the country ; apprentice yourself to some good farmer learn your business thoronghly and practically,
and then start ou your own hook, This is th

ROCHESTER, N. Y.,-FOR THE WEEK ENDING SATURDAY, NOVEMBER 5, 1859.
\{WHOLE NO. 513.

M00RE'S RURAL NEW-YORKER, RURAL, LITERABY AND PAMILY NEWSPAPRR CONDUCTED BY D. D. T. MOORE, With an Able Corpsof Assistants and Contributora,

PALL HARTEST-COBN, POTATOES, ac.

 ber cut the corn in some localitises, and since that
time whehe had but tatle fivorule weather, with
occasional frosts,
and late corn bes not ripened.
 4th of Jnne na to make $e$ ll late, and a good deal had
to be repplated. From that time to the 15 th of Jone, and later, many were engaged io re-plant sirited by cor-growera. In this they were no
gratifed. A letter before us from Outraio count? in this State, says:
destroyed one-balf of
diminibebed its ralue
neclicut, and most of the Enstern. The Con
 reports of the corn crop in the West.
Porarozes neverer yielded bettor is this section From 』most all zoctions of the country, howerer,
We bear complaints of rot. When at the State Fe bear complainto of rot. When at the Stute ICland and Nor Jersey, that a great portion of the
crop was diseased, zod that to Peach Blor
 prepared to hear that tbis new and favorite o
whe predisposed to dieene for wo "us predisposed to dizense, for the seed that $w$.
obtained from the East lest spring was affected and nearly one-third rotted before we got reedy to phant, and a good many of the sete rotted in the ground. Jony Jonswrox, of Soneca Co., writes to
the country Genteman:-"I am aorry to say our potatoes are all going witb the rot, and a better
crop and botler pounity yoars. When in Canode lately I found they ware also commencing to rot." Here, the polatoee grown on heary land dre very badly rotitiog, while On light land, as a generrul thing, thay are sound. We barte grown more than tbirty ravities this beanon, and hise Rach blows dug late or heary soil was balf rotten, all otheras cound. The sield it dery wreet New Yort, bo for ta wo can learn, is very great Joaspr Raspolpg, of Penfeeld, in
this county, informe of ealable potatoen on thateren grow 2,800 bushels by the buyera for the New Yorts market made Suckeyes giolded the best, giving 260 busbole to The wore; Prook Blours and Flukes alike, 250 bosh-
elion and Dykismank, 200 bushols. These four
zorts were the most productive. Our experience hum conrinced us that the Davis Sedpling, a Xeasohusetts potito, of which we shall ay
more, is the tootit productive good potato grown In bills, throes feet apart each wiy; ;it produced 816 bushels to the acro; in rowe two feet apart and the setu one foot apart is the rowe, sty buab-
 of Prance Allients, and a statement that be haci
grown 800 buabels on a fraction less than so scre The Root Crops were never better, seldom ao
fine, so far as twe beve seen or heard, and never perhaps, were they more needed to malke up for BUTTER AND CHRESE.

rield a profitable per centage, or become a draw bock upon the returns of labor expended in other
departments of farm economy. He should know Whetber this portion of his business is furciishing
its pro rata towards the liquadtion of the demands
upon bis purse and if foud

## standard. A month or two since we publisbed an extract from the N. Y. Triburne, showing the sacrease in

## butcbers, and the figures then presented prove that a galn of about 300 pounds per lead

 attained in a comparatively brief period of tumeIn furnishing boef to the mass of consumers, th faroing community, -by the exercise of judgroeut
and care in the eelection of animals from which to
breed breed,- - bave nccomplished an object the pecuniary
value of which cannot be over esturated. The success Which has thus far attended the effurts or qualties of suct arimplase as are "meat-producing
is the result of close scruting and comparison, and by the emplogment of the same agencies the
Dairyman can solve the question which, as we have before intimated, is agitating the public part of October for the past ten years, as the stand publshed in the Rural, we note quite an
increase in the increase in the prises of dairy products, sud i
the anoual return, per cow, now equals that o 1850, we must conclude that this branch of fa
ing pays well. Let ub exumune the figures:

During the period aelected, (October,) for the
first five years of the decade presented, the age price of cheese was about aix and one-half cents per pound, and of butter fifeen and one-half
centa; for the closiog five it advances to nearly oight and one-half cents for the former product,
sod nineteen and one-fint centa for the later -an adition of more than twenty-flive per cent. to the one, and but a fraction less than s like amount to
the coat of the other of the articles under consid oration. And the end is not yet. During all these years, (with, probably, the single exception
of 1856,) of 1856 , overy
in a crock of butter for the minter's supply, but this privilege was denied the great majority the present season. The country within twenty or
thirty thirty miles of Rochester, has usually furnishoc
sufficient for local consomption, but now our deners are compolled to widely extend the area of search for a good, sweet article, and, too orlen,
they find themselves "in the pursuit of tnowledge under dificiculties." Western Penngyivania and Northern Obio furnish a goodly proportion of the "tupplies" in this particalar line, and we are indebted to the nliul of Buckeye millmaids for Who would fain have the credit of ita production.

## THE FAIRS

Trie "Fairs" for another joar are orer. Both
Old and Young Amorica have made another
annual bestowment of thoir tio upon i-tin-erant showmen and peddlera, as also upon the numerous proprietors of antables and (asd to sasy, in too
masny cases,) of drinksbles, candy boyo end all the
other people are constantly besal at orprises with whioh ering. I ssid money-takiog : any doubts in that
quarter might speedily be dusipated by conaider quartier might speedily be dusipated by conatider-
ing the empty state of many provioualy woll-olled purses, some of whose owoers, afler having spent
the day snd their money in gratifging their rppetites, instead of observing fios cattlo and eheep,
return home in the frm belief that Fairs are a
humbug. that is, all but thi pultig
 Btringst But these evils (of we may so call them,)
are but the necessary attendants apou the "Fair," and due submission must be exeroised, or rather
one must be proof agaiost them in order to fully carry out the original dosign of Fairs, vi.s, the
display of products of industry for the notice snd Fairs (or Agricultural Bxbibitions, as bas been
 ber and the crowds thas thrung to them. They
aro the center of attraction to the youth in general
and the Farmer's srd eceater or atreactoon to the youth in geners
and the Farmer's Boys in particular, with which
latter clase it may be conaldored the chief boliday; and such being the case, they of course should bs
allowed to attend; and they geoerally are, but

| the norning, when the bees are qumet. If you wish to examine the condtion of the bees aud the comb, and use a Laxgernora bive, which gives the keeper allmost as wueb control orer bis bees of old ase orer bis cbickens, then roll up a prece make a good smoke. Take off the top of the bire, and huw a litte smoke among the bees, and they will betcome quiet. Then go to work, and if at any time during the operation the bees show signs of discontent or unger, give them a little more mobe, aud all "wll be quiet, the bees becoming ua aud not assumed, which is somewhat difficult for the beginner. As a sure protection agurast the of the bee, get a piece of wire cloth, such the bottoms of seives are made of, eighteen nches wide and three feet long; fasten this together in the form of a large lat, so that at will cover the bead and rest upon the shoulders. The top may be of cloth or a thin piece of board. Oa the bottom edge sery a plece of cloth oue foot in width, something like a fritl. Put on the bat, tuck the rill under your coat, and button it up, and then put on a par of Inda rubber gloves, and no bee can possibly ioflect a stiog These can be used uat:1 you gaia confideuce, but you will soon throw of the glores, and use the bat only occasionally When performiog some important operation, like clinggogg bees from one buve to another. The fact 1s, bees seldom sting anless pinclied, or burt in some way, unless they get umong the hare, in which case they almost wrarmbly use their stiogs, Bees filled with boney seldom strog. $\triangle$ sprumkhag of sirup from a waterıg pot wul quiet, in a minute, the mostangry swarm. <br> EUROPEAN AGRIGULTURE, |

| About Winter Barley. <br> Ix a letter to the Brancb County (Mich.) Ropub. lican, Mr. Jas. Clisamb, a well known and prominent farmer, thus writes of winter boriley :-" The berley has brea growa in this vicinity for the last three years, and is, consequeotly, no longer an experiment. With us it has done well in every instance where it has bad any chance. The general siold is from twenty to twenty-four babbels to the sore. Judging from what we have seen of the grain, it is capsble of yielding eighty bashels per acre. During the past beason it has been raised by the aide of spring barley, and has produced four bustols to one of the spring variety. Mr. Asos Colver of tbis place (Quincy,) has raised during the past season, sixty busbels por acre on ost stubble once plowed, or one hundred and eighty bushels on three acres, and on land that bas been cropped for eight years in succession." <br> We think it has decided advantages over spring barley, viz:-1st, It may be sown after farmers get through with their hurry in sowing therr winter wheat. 2d, It may be harvested before whest is ripe. 8d, It bas no black or false heads. Ath, It yields two to one, at least. 5th, The insect will not hurt it in the fall, bnd it is so early that the weevil wall not burt it. <br> We are in hopes this barley will prove a substitute for the wheat crop, if we should be obliged to give up the cultivation of that grain in consequence of the insects and weevil, which at present threaten its destruction in Michigan. This variety of barley should be sown some time between the 15 th of September and the 1st of Norember, requiring about two bushels of sced per acre. It will ripen |

## DOMESTIC NEWS.

| Now Mexico, says he sam Kir in good bealth, immedistely preceding his departure, and hence emphatically contradicts the report of bia death. Fasuington Irving died suddealy on the aight of the 2sth alt., at bia zesidence at Irvington. He retired to his slet ing room at $101 / 20^{\circ} \mathrm{cock}$, ond after undressing fell bod expired in about five minutes. IIe mas in the 77th gear of his age. <br> Tee Paris correspondent of the Times states that Seuator Seward had reached that city in good health and spirits. He indignantly denies ever bearing of the projected insurrection at Harper's Ferry, and although be recolleots having received a call from a man knowa as and was no mention mado of any attempt at insarrection. Colonel Forbes asked bim for means for another object, which were refused; and that was all he ever sam of the individual in question. <br> Norics was given in the Missibsippi Legislature, be 10 th ult, by Mr . Graham, of the foture introduction of a bill to abolish existing laws againat the introduction of slaves from abroad into the State; and to legalize the holding of blacks in bondage introduced from foreiga countries. <br> A Reponlican State Convention is called to meet at Jeffurson City, Mo., on the 23th inst., to appoint delegates to the National Republicaa Convention. It is presumed that the delegates from that State will preaent the name of Edward Bates. <br> Tur Republican National Committee will meet at the Astor House in New York city on Wednssday, Dec. 21, to decide on the time for holding the National Convention of 1860 , and to agree on the terms of the call. <br> Tue vorernor of South Carolina in bis Message, Whle showing the adraptange of a united Soutb, says:- "If, as I solemply believe, we can no longer live in peace and harmony in the Udion, we can form a Confederacy with ablity to protect itself against epery enemy, and which witl command the respect and adtoiration of the world." |

THE COTTAGE AND THE MANSION. Or Cottages and Mansions we all have often
beard, and possess some knowledge of the splen.
dor and rogal mangificence of the one, san the
homelike beanaty of the other. Though peace and contentment may drell in the Mansion as well as the Cottage, 弪t this is the exception and not the
rule. FFillow me, reader. In the city of B. stands
and a tatately mansion,- ซealth and magnifcence reign around, and the beart of it proud owner is as cold
and formal 28 the marble columns that asoron its
freatone front pervades the mansion grounds, that if freezes the
forwers receire the rays eren of the noindas sup, an
thee hide their perfame in their heart's until the manston occupants hare passed by, and
then give it to the wooing breezes or the beggarchild who pauses by the garden paling. And if,
percbance, \& woodland songster strays so far from
home as to onter the rich manp,'s garden to purlo a tempting cherry, he hushes his warblings as he that happiness reigas not where all so studied and so stately is; and the lore-music that gushes from
his thro around. And the song.bird in the mansion sor rows in his gilded cage, and pines for freedom and Nsture feel the chilling infuence glad things o Nsiure fee the cbilling influence of wealth and
selishness. ped in this world's pleasures, mansing the wrab riothine path to earthly bonor and glory, feel no the hearenly peace and bappiness of the soul tha
knows that "ia his Father's house are many man sions," io glory and splendor, excelling all Eurth'

 Fould Lave quitted France by December 15 th. lished in the M Moniteur, shomis an advance of ive
cights of $A$ cent The Frenoh frigate Perseseranace, with troops.

## The Paris was small.

It is reported that the Protest of Austria against
the Regeney of Buoncompagin has been withdrawn
in consequence of Count Walmeski having given
an assurance to Prince Metteroich thast the nomination would in no way
ral Italian Dy nasties.

|  |  | The Atlantio Telegraph scheme baviog suc. ceeded, sll other visionary sad imposilole enterprises will of course ralse their heade and step formard; no I venture forth with mine. It ta no less than thia Msake a bog pastore blge eoongh for all your hoge, and divide it into two or three parte, 1ettiog the animala remsia only a wees in and <br>  deem that idea every way orligioal, bat I won t take ont a patent right or copyright, provided you give credif to the Rusal for the suggeation. We give credst to ibe Rubal for the suggeation. NVe bave often heard that a change of pastares matkea bave oftern heard that a change of pastares mabes fit calves-horees and sheep, too, have not been forgoten in thfs connectlon; bat hogg, alas! are not counted in. I propose to count them in. I don't know bat they pay as mach for thetr board as angbody, its coast and quality belog considered; <br>  they had fastidious apptitea" Well, you ought to know it Jost jndge item by yourself. The likeness ts closer than you are amare ol I am not well enough informed to express an opinion as to the beest kind of grass for pige, bat $I$ opiniou as to the bebt Eind of grass for pige, bat have heard a man in a fat owise, A boy in a peach orchard, a young fellow going to the Foarth of Jals between two girlig with white drebses oo, com. pared to "pigs in clover," from which I cooolude that somebody has found oat that a olover.feld is 8 delectable place for hogat I ask for information, and would be glad to kDow of Rubat readere, which are the best grasees for swine? I think hogs should not pastore in the same Gield with other stock, as there is an ot,jectlonable tbemselvep, and have it well fenced and plesty of 1 eocuetimes thins that hoge are better for ring in their noses - - H т. B. <br> a few hours in tee genesee valley. ONE day last weetr we were at Avon, with a ferm unemployed hours before as. As we had oome unemployed hours before as. AB we had some farming frienda in the neigbborhood, we thought a part of the time spent with them would be use- fuli, eapeolally as we had never been opon tho frin eapecially as we had never been opo forms in that region, though often in aight. $\underset{\text { A good hall-bours' walk bronght us to of friend's }}{\text { hoase. He is the }}$ land farm of aboat seven bandred acree, which he rents from some heirs of the Wanswourda Estate. Nearly or quite five hundred acres belopg to the tlats, and are more or leps sabjeot to the overflow of the river. He bad no whest apon the futa, his and oats. The barley was nearly a fatliure, oats tolerable, and the corn promising a good crop. The meadows were very productive, sielding a large borthen of grase, and generally of firat quallity. The pastores were very fine, equal to any of the famons Blae Grass pastares of Kentucky. Upon thees, for some sears to corme, the yarms along thls region will be compelled to depend for their main sapport <br> The grazing of cattle or the dalty matt take the place of wheat growiog, and these "llata" will farnith the materilul for capital dairy farms. $\Delta 8$ more as in any regton of the State. And when the her "fate," there will be no diffalty in roising wheat underdratning when required. Still, for the time befog, the valae of the lind most depreciate very senitibly, antil a more diveraifed aystem of farming The maldge will not be got rid of it hes been more or less prevalent for the leat twenty yeare Its ravages hase only beoome sertona, when, by too ments of fortility have been so exhanated that the wheat plant does not grow wilh fis accnotomed vigor, Some olther element mast be returned to the earth, tesides what clover add plastrr forpisheaz before the farmer ean defy the midge. That will be foond in barn-yard manure, The rich pastarage of the "ande, and the great yield of bas which they will forntib, render them very valasble, sad it the landiords confino them to those two branobees, the permanent wealth of that region will not be materially diminighed. No oountry can be really independent that depends malnly apon grasin-growing for the sapport of ita farme It will be fond that the dairy reglons of <br>  Whest region, althoogh the whent land commanding mooh the highest price per scree. Many thak that more oapteal is invested to whear farme than dairy forme It is a mioteke - for though the whest farms are valaed at a higher price difference. <br> The entire fallice of the wheat crop in thite reon the Valloy Canal, just weet of Aron, whero fom yoars ago srom 250,000 to 300,000 babbils of Wheat were aken in joarly, they do not expeot to | bay 3,000 bashela tbit year, and for two years past floor has been imported to supply the jubsibitants of one of the finest wheat reglons of the Union. The midge, ons of the fratest of inceots, is in bas to contend with, and ite power will noou be felt over a wbole Contipent in ibis State aloza, its ravages have cost the farmers not leas than ton mitlions of dol'ars for this jear. When they reach the blaot lande of the pralries in the Western they are now in Michigan, it will beoome a pretty grave question as to where we ahall obtain our whe at bread. <br> Bat not mach hes been sald aboat oar friend's farming. We will defer that till another visit:-10 <br> SELF-OPEEATHO WELL BUCEET, <br> Eds. Rural:-Although we bave, In this progressive age, almost every expedieat for drawlug we'er concelved of; and many of them are very valua ble in reddering the labor of drawiog water from wella and cisterns comparatively easy; get there are bundreds of your readere, and others, who will agree with me, that not by any of these means does rater taste as pare and wholsesome as when drewn from the well it a bucket <br> Those, thed, who wish to drink water pare-free from the taint of decaying wooden pipes or rusty iron-will, with me, chgose to let "The Old Oaten Buoket" havg in the well. <br> Thoogh "dear to the hearts" of all "cold water men" tbere is an frconvenience attending it, as it is commonis uaed, fa filling and emptring. With yoar permission, I wifer your in a cormet ine came the diflenity, Here, thed, is a correct drow- ing of my well carb, a board being left off in front to sbow the mauner of eroptstog the bucket. Lise Its owner, it is piain looking, but I Ind it answers the parpose for which it was deulgned, admirably. <br> cut a hole three Inches square in the bottom of the brecret, thed on a thin plece of board, foas the hole in the bucketritacked e soft plece ofleatber, lettiog it extend far enough on one side to tiok to the bottom of the baoket-rormiag e blage to the valve. It then bad a blajksmith move the eara from or to that point where the backet when filled would balance nicely without tippiog over. I then bad the ball cut in two pieces mating each plece a foot long, after being stralghtened, and an oge turned on each ond, as seen in the drawing. <br> A thin plece of lron If faches long, one edge bent over, for the hools, fastened to the eprab, to side. I procared a well twisted foll $\cos d$, twice as long as my well is deep, foond the centre and fastesed it, in two places, by driviog a staple two Inches ouch side of the cencre of the axit, then woand tbe cord evealy on the axle, - alwne windiog tnwards the exde, Thd farlened the turned evealy, and aut made of s large aspling sa is often the cme. |

| midge, I think it in useless to sor any other, exoeph, perhapa on some dry sandy solle. If farmers in this mection would continue to grow these hardy varieties, they may, in the course of a fem jears become so acclimated or obanged in quality, as to be nearly if not quite equal to the whiter varieties formerly ruised in this region. Ogden, N. $Y_{n}$ 18s. <br> HORTHERIT ILLIEOIS CORRESPONDENCE <br> Eds. Bural:-You have heard "hard times" ontil it has got to be a worn out story, I suppose, bat it seemas the West has cried "woll, wolf," when it was nothing more than a barmieas for Leat year ocer fielda waved with golden grain of a luxariant growth, our garners were foll and ronaing over, and though there seemed to be a dark clood havging over the commerclal horizon that nensibly affeoted the farmer, yet he coald feel a kiad of self complacenoy in thinking that at least Provi. dence had emiled opon bie eforts and boantifally supplied his immediate wanta. But there is a marked contrast thin gear. The crops are very poor on the rich prairles of Illinois. <br> First, about the wheat crop in this section of the country. A variety known as the "Canada Clab" has entirely falled. As it jielded more than any other klad last year, farmers put in a great share of it for tbe crop of the present season, thus proving that the experience of one year will not almays be anccessful the next Many fieids of this variety stand anharvested-some farmers cat down their foldo then left it laying in the gavel-others |

SEALS OP THE STATES. - NO. XXIII AND XXIV.

|  $88^{\circ} 30^{\prime}$ weat longitude Alabama was originally iocladed in the territorial limits of Georgia, except a portion which belonged to Floride In 1802 Georgia ceded all her territory weat of Chattabooohee river to the Missisisippi to the Uaited States and in 1817 it constituted the Misisesippi teritory until it was edmited into the Union, and became an independent state in 1820. The popalation in 1800 was only 2,000 , and in 1850 , 771,671. The masses are divided into, whites, 426,507; free colored, 2,272 ; llavee, 342,892 . <br> The sarface of this State exhibita muoh varietp,some distance interior it is low, level, soil sandy, and the prevailiag timber ping. The ceatral portion is oudulating, with \& deep rich, and produc. Approaching the north, it rises into a hilly region, and in the north-east corner of the State it becomes mountainous, oaused hy the outbern termination of the Alleghany ridge. The elimate, varying from the soath to the north part of the State, is favoreble for the production of ita great staple日- cotton, rice, sngar, aweet potatoes and Indian corn, and in the middle and nothern part, wheat and other cereals. Alabama has great mineral resonrcea; the entire midde region is nnderlaid Fith bitaminone coal, and deposits of iron ore, and in different localities throngbobt the State, are lesd ore, manganese, limestone, marbie, da; in the north east gold mines have been worked with some вuccess. <br> The Execative power is vested in a Governor, Legisistive power consiasta of a the pente and Hoase of Representatives; the Senate consists of thirtythree members, eleoted for four years, one-balf going oatevery two gears; and the representalives number one bundred, elected for two years. The legislatare meets biennially in Montgomery, on the second Tuesday in Novenber. The jadges of by the joint vote of the tro branches of the legis. latare for a period of six gearn. The right of auffrage is posse日sed by every white male cifizen of twenty-one years of age, who has resided within the State one year immediately preceding an clection, and the last three monthe within the countr, $\qquad$ |

| the chinese sugar cane <br> EXPERTNENTG OF JOSEFHR LOV ERING. <br> In accordance with the intimation contained in the last lssue of the Rural, we commence a detall of the experiments made by Joszpa B. Lorsenne, of Philadelphia, for the parpose of determining the value of the Chinese Sugar Cane as a sugar producing plant. It was the desire of Mr. L. to throw what light he could opon the suhject, and, In the event of the result proving favorable, to give such a formala as would enable the unioitiated to proceed with confidence of success To this end he devoted considerable time - from the 28th of September to the 20th of December, 1857 - and brought into active use every appliance that sclence could suggesh in order that all his movements might be as accurate as the olrcamatances would allow. Whatever is to be the altimatum in the case of this cereal, ita caltivatore are mach indebted to Mr. Loveano for the energy and tact he has diaplayed. <br> On the 10th of May I planted about half an acre, on apland of good quallty, such es would fleld, in ordinary seasone, filty to airty bashela Indian corn to the acre. The rowa four feet apart, and the plants intended to be six inches apart in the rowe, bat whiloh, on taking ofr the crop, proved to be a Little over seven sachea apart. When the canes were about eighteen inches in height, I had the suckers removed. Daring the month of Jane I passed the hoe-harrow throagh it twice, a man fol- | My apparatua and atensils for condactiog the periments consieted of the following, viz:- $\Delta$ pair of iroa rollers, seven inches dfameter and twelve foches long, set in a frame one elghth of an thok apart, with spout to catoh and collect the jalce, and a crank tarned by hand; a fewn rugar moulds and pots; some ivory black or animal car bon; two filters, made of commong bag; a ther- the ehape of an elongated padding mometer, Besume's Pese Sirop, or saccharometer, and a polariscope. |  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
| thlag, I am anse nincerity is better; for why doee any person dissemble, or seem to be that which he <br>  |  |
|  |  |
| disemble te to pat on the appearance of some real excellence. Now, the beat wis in the world toeeem to be anything, Jo really to be what je would |  |
|  |  |
| eeem to be anything, ja really to be what je would seem to be. Besidea that, is it many times as troablesome to mako good preteace of B quality as to have it; and, if a man have it not, it is ten to one that he is diacovered to want it, and then he has all bis pains for nothing." |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
| Thirrs is a coldnesa and precision about this person's dwelling that makes your heart shrink back (that is, It you bave the least atom of sooiabinty in your natare) with a lonely feeling |  |
|  |  |
|  |  |
| the same which jou experfence when you go by yourself and for the frat time among decided trangere |  |
|  |  |
| strangers <br> Evergthing is in panful order. The damask ta- |  |
|  |  |
| blecover has been in just the same foldseveraince it came from the vender's shop, elght years ago and the legs of the chairs have been on the exact |  |
|  |  |
| diamonds in the drugget they were firat placed on; by-the-by, do you ever remember of seeing that same drugget off the carpet anderneath? No- |  |
|  |  |
| for she never has company; the ronting, the unttdinese they would occasion, would cause the poor <br>  |  |
|  |  |
| or rather annatural-life. Thoogh antidiness is $\mathrm{s}^{\prime}$ fault all poople ehould avoid, especially the goang. yet for merog's sake, orge them not to be particu lor. She will become as hatefal in the sigbt of her |  |
|  |  |
|  |  |
| The particular lady generally lives in the Eitcoh. en-and an escruclatingly tidy one it is The great parlore, with their orimaon cartaing, Tarkisb |  |
|  |  |
|  |  |
| carpeta, mammoth mirrors, beantifal mantels, and elegant paintinge, always elosed. Nobody visits them; nobody enjogs them; the children tread on |  |
|  |  |
| tip-too to steal a glance fato them, their eyes ex. pressive of wonderment and a cantions air of |  |
|  |  |
| pressive of wonderment and a cantions air of dread. |  |
| scrubbiop, and secrabling and washigg and dastiog. The door-stepe, the wasl-boards must be dafly acrabled, thongh im macellatels white they already |  |
|  |  |
|  |  |
| thin and genteel by repeated cleaning. <br> You can tell her crossing the street; she watches |  |
|  |  |
| for every rehicle and watts until it has passed a |  |
|  |  |
| square, for fear of being aplashed; and even in dry weather she crosses on the joints of her toes, and belds her dreas above ber ankles. Her con. |  |
|  |  |
| and holds her dress above ber ankles. Her con. stant fidget pears the fleah from ber bones and |  |
| color from ber cheess sho nevor can geta servant to stas long with ber. Wo never heard of bor ono "particalar lady" who retained a domeatic |  |
|  |  |
| longer than a year, but then sbe mas as "partica.lar"ne her mistreas |  |
|  |  |
| YOUNG LADIES $\qquad$ AND HOUSE-WORK |  |
| A fbiend of ours, remarkable for atrong, good senge, married a very accomplished and fabhiona. ble 3000 g lads, attracted more by her beaty and |  |
|  |  |
|  |  |
| accomplibiments than hy anytbing elee, In this, It must be owned that his strong, good sense did not seem very appareat. His wife, however, prov |  |
|  |  |
| ad to be a deeply attached to bim, thoogh she atill loved com |  |
|  |  |
| pany, and eneat more time abrosd than he ex. actly approved. Bot, as hle income was good, and his hoobe farnithed with s good supply of do meatice, he was not amare of ang abridgment of |  |
|  |  |
|  |  |
| comfort on this account, and he, therefore, made no objeotiens to it |  |
| One day, some few montha afier hif marriage our friend, on comlog home to dinner, bsw no appearance of his usual meal, bat found bis wife in |  |
|  |  |
|  |  |
| great trouble lustend <br> "What's the matter ?" he astsed. |  |
| ing.' replied bis wife, "and the chamber maid knew no more about cookiog a dinuer than the man in the moon. |  |
|  |  |
|  |  |
| thon?" Inquired her hasband, very coolly. <br> "Onder my direction? 1 should like to see a |  |
|  |  |
| dinner cooked onder my difection." <br> "Why so?" a, aked the hasband in aurperse " yon |  |
| certalaly do not mean to aay that you cannot cook B dinner." |  |
|  |  |
| "I cortainly do, then," replied his wife. "How ehonld I know anylblag aboot cooking?" |  |
| The busland was aileat, but a look of aatonishment perplexed and worried bie wife. <br> "Xou look very muoh sorprised" she sald after |  |
|  |  |
| a moment or two had elapsed. <br> "And 10 I am," be answered; "as much sur- |  |
|  |  |
| prised as I thould bo fo finding the captain of one of my mipe unacquatnted with narigation. Dos't son know bow to cook, and the miatress of a faml. Iy? Jane, if there is a cookt! ing school anywhere in the citty, go to it and complete your edocation, for it io deficlent in a very important particular." -T. S. Arthur. |  |
|  | new scene. <br> The weat wind drops away till not a leaf quivers in the stillaesa. The sky हlowly changes from criman to orange, from orange to rich astrion trith that fade into pale primpose, and when yon think the grey of twilight has crent over the whole it faebes up agatn, as beautloul, it fuinter than before. Then if the harvest moon comes ap, full and red, over the foreate, and lends the magic of moonlight to the scene, all will be ready for the notes here and there-taning tbeir instromentea, perbspe. <br> First comea to your ear the sound of the river. |
|  |  |
|  |  |
|  |  |
| Terreare hearts all the bettor for keeping; they become mellower, and more worth a womar'a acceptance than the crade, onripe thloge too frequenuly gathered-as children gather green fruitto the discomfort of those who obtuan them <br> A wowar without poetry is lilio a landeospe withoat somahina |  |

| Terrible Balloon |  |  |
|  |  |  |
|  |  |  |
| Mich., on the occasion of a Sanday School cetebration. Neserg. B. and T. took bents in the car, and ascended affely and steadily. After remaining |  |  |
|  |  |  |
| about forty minates in tho air, they alighted in the woods in town of RIge, Jenawee connty, distant |  |  |
| about eighteen miles we日t of Toledo. Several men came to the asaistance of the sdventurers, and they |  |  |
|  |  |  |
| proceeded to prepare the balloon for packing, to be taken back to Adriad. In doing this the bal- |  |  |
| loon was tarned over, and partially apside down,to dieantangle the netting sud to reach the valve. |  |  |
|  |  |  |
| To do thif, Mr. Triurston took of bis ceat, and got astride of the valve block. He then suggested that the car be detached from the balloon, while |  |  |
|  |  |  |
| be should hold it down with his weight This proved a fearfal calcolation, for no sooner was the |  |  |
| atill infated bslloon relieved of the reight of the car, than it ahot into the air with the anddenness |  |  |
|  |  |  |
| of a rocket taking Mr. Trobston along with it seated upon the valce of the bslloon, and holding to the collapsed silk of the airebip in that portion |  |  |
|  |  |  |
| of fts balk! In this perfectly belpless condition, the ill-fated man spod etraight into the sky, in the |  |  |
|  |  |  |
| foll sight of bis companions, even more helpless than bimself. The balloon wes found on the 20 th |  |  |
| alt, Dear Baptiste Creek, C. W., bat the fato of the xronsut is wrapped in codjectore-that it was horrible, almost beyond precedent, there if little roous for doubt |  |  |
|  |  |  |
|  |  |  |
| Broozs, of Bt Lonis, made an accenslon. The reroasat descended aboat tweyty millea from Cen- |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
| and by some nuexplalined means the balloon got away from him, and darted off libe a rocket it |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
| they would ecrer come down lisee But on Satar- |  |  |
| lea the starting point The top, sbout ten miles from the startiag phial The machive had ron all night, and from the fact that |  |  |
|  |  |  |
| it was seen at least twenty miles from where it started, at nine in the evening, it must have called |  |  |
|  |  |  |
| around in diferent directions during the night, with its preclous freight, with the intention of |  |  |
| landing them as near home as posghble. The children were found bafe. The oldest, a girl, said that her brother complatned of being cold, and she laid bim down in the bottom of the car, and covered bim with her apron, and he went to sleep, and that she did not aleep at all. |  |  |
|  |  |  |

| her an angel!" But the dajs are coming when the dark waters will brentea to owreep over joa, and the blue hills of Hearea so far diswans bat no "ahhoing onee" will walt for goe "besond the river," for you have not the love and trust or yeera gone by. <br> Ob , why will vo so live that the Eearen whict in chillabood neems so near, recedes as yeara mear on? <br>  my room lito a glory, while s volce is whispering from my Blble-" Except ye become an ittlo ohill drean ye ehall not enter into the Kiogdom of Hen dren ge obill not enter into the Kiagdom or hen ven." |
| :---: |

HE DOES NOT GROW OLD.
In a quitet charob gard there is a little moond all copered with grean-for many a year the littie aleeper beneath it has been there in the anconscion
sileep of death. Once that little aleeper greeted sleep of death. Once that lithle nleeper greeted
me with amme I drew near to his cradio. Ho knem no other language, and never pronounced a word His was a bhort hife,-many a long jear he
has rested beneath tbat mound He was never atrong but had a perfect frame, and his unfolding
life shadowed forth hia immortal destiny, and Waile of hls own-that minge, I knew that he had
path of him from me, still I looked apon him with pleasare, and as day
by day I bebeld his unfolding life, I was drawn to him by a power that I could not myeeif controlThe destroyer came and took bim, and he now sleeps benesth that little monad. Ho does not
grow old, bat is stlli to me a little child. Hie grow old, bat is stil to me a istle child.
death awoze withlo me a nem tenderness of love,
and I have gince been able to sympathize with those in amliction as I could not before.
How grest the change will be before I shall see him agaln? When we parted he was a helpless cbsld and knew but little. He now wears robes of
glory, not formed by mortal hands, and has an orbine bot it is so vast and wonderfal that I I csnnot
min
comprehend it knowledge, and may be my teacher and guide.
When I think of the sorrowing and danger of our pathway in life, I no longer grieve that tho
opening flower was so early taken to bloom in the garden of the Eavior-taken before the bad had

two dollaks a year.

VOL. XX. N0. 位, \}
ROchester, N. Y.,-SATURDAY, DCTOBER $30,1858$.
WHOLE NO. 460

| two, with young stock, antil the tarf is close and strong enough to bear the treading of heavy strong cattle. <br> The essays of Mr. Dixon,-for which the 8ociety awarded a promiam, -aro conflined to the effecta of <br>  One of the farma inupeoted by fr. DIzon, conelst ing of 98 acres, had been frequently manared, bolled bongs to the valae of $\$ 1,250$ spread upon it, bat without any apparent increase in vegetation, or change in the quality of the land At the period of his first visit, (1838) did not believe that 300 poonds of bay conld be obtained from an acre.Draining was commenced, and the gear following (1839) the stock on the farm, which bad previoasly consisted of four cows, was doubled. In 1842 the dalry stock was further increased to twenty.four cows, and in the autumn eighty sheep were pat on the land to consume the saperabandant grass. The draining was not thorough, for surface water was apparent in many places, get exfficient facta were elicited to prove the advantages derivable from a syatem of water condoits. <br> In refereace to Liming, Mr. Dixon states that he was emploged to bring op eeveral handred acres of land, which was completely worn ont,-conaisting of "a number of small farma, which had been purchased by a gentleman who deaired to aee the land of his early days wear a more pleasing appearance." The soil, for the most part, lay on poor clay or slate. Inther extensive dralning was done on the clay land; and the material thrown out of the draine, being of a boft and cobesive charater, was not retorned. This was mixed with lime in equal quantities - the object being to destroy or redace the natare of the clay-and in about fourteen days the lime nearly barned the lay. The compost was then turned over altogether, and was completely comminuted. In due course it was spplied to the land, and in a fow weeks there was am ple evidence that the practice was correct. The compost acted sooner than lime alone, and to some extent more effiective. The amonat of lime ased varled from eight to nine tans per acre. In one sear after the llme had been apphed, 10s. to $15 \%$. per acre advance in reut was easily obtained. <br> Phoper Ttme to Fble Tmbre-An article apon this sabject in one of our American Agricaltaral Journale, was copied by the London Gardencers' Chronicle, and the opinfons of British foreaters were sought apon the American practice of felling oak and other timber trees while the leaf was in fall vigor. In response thereto, Whe Mastese, of the "Exotic Narsery," writes to the Chronicla sap. porting the American theory. In his argament he adverts to pleces of sonnd oalk removed from the tower of the Canterbury Cathedral, which mast have been placed there with the bailding, seven handred years previons. "It wes tmpossible," remarks Mr, MI, "to state at what preciee period of the year this timber was cat; bot, as the bark was atill on, It coold not have been la Jure-as fo now the English practice-it might have been in mid-winter, or it might have been ather the leavea had performed their office in a great measura, and before their fall. I am led to this sarmine by the fact that when timber in cut in $A$ agast and Beptember, It does not pour out fts eap, the watery particles being st that time in the leaves and smaller branches, and not in the more compact part of the tree, and by aerering the branchen and leaves from the trank you prevent ita retare. It is a indiapatable faot, that in ahip bailding it often occars that before the reseol is completed some portions have deaajed by dry rot Now, without dogmatizing apon the matter, I woald sarmise that if the timber had been oat | When it contained the amalleat portloz of asp, Buch - result would have bean far lesa likely to have occurred. It has long been a practice with builders to employ green elm for foundations where the ground is treacheroas. Why use elm out down when in fall leaf if it was not less likely to decas than elm cut down af the obuertimo? <br> PLOWING BY STEAM. <br> Witen chronicling some of the experiments made with Steam Plows in England, we expressed the optulon that, "no land in the world is better adapted to steam plowing than the boundless pratiles of the West, In ten years from now, scores of Steam Plows may be engaged in turning over these rich soile." Breaking up the prairie is a seriona and costly wort for the new settler. It can be done with no ordinary team which be can beep, therefore he is compelled to employ those who have proper teams and plowe, and make this their busioess. The price pald for this worts is geverally about three dollars per acre, so that the netr settler on the prairie who breaks op one hundred acres, has to inveat $\$ 300$ for plowing, although himself and bays may stand idly by and look on. Then fencing on the prairie is costly, as la boilding, and he will need a "smart pile" of casb to get a good start We bave seen the crops of tbe farmer destroyed for want of fences and barne,his cattle unbhetered from the terrible winde that sweep nuobstracted over the boundless praifies, and when we inquired the caane of this, learned tbat the unexpectedly large outlay for boilding a cottage and breasing ap, bad evbursted the means that was designed to balld barns and feaces, sny inventiondthat will lessen the cost of breaking op and fencing, will be of Incaloulable benefit to the Iratrie States. It is for this reason that we bave anstously looked for and destred the saccess of the Steam Plow. <br> The Executive Board of the Agricaltaral Society of Illinors seems to have taken the same view of the matter, and accordingly offered "a premlam of five thousand dollars for the beat ateamengine suitable for plowing and other work, the practicablity to be declded by the Board." In view of the eacoaragement thas offered, Mr. J.W. FAWKise of Ladcarter, Pa., exhibited and worked a Steam Plow at the late State Fafir at Centralla, an engraving of whlob we give from Emery's Journal. We copy oar description of the machine and its operation from the Chucago Press and other joornals, all of which are load in its praise. <br> The engraving showe the general featares of the englae and plows, and can hardiy be miaunderalood. The large or propelling wheel in the centre is barrel-shaped, whlob facilitates turoing cornors very much; it fo aboat six feef long, and five feet in dismeter, thas prosenting a great amount of surface to the groand in traveling; the forward wheels are of about the same diameter aod one foot aurface, and are the golding wheels, beling mored by the operator by a borew gear. The plowa are hoog in a frame at the rear of the en-gine-each one independent of the other, and drawn by separate rods attached to renr of the engine. In order to keep the plows olose to their wort in aneven or irregular aufaces, strong coiled springs are pleced on the suspending rodi. With the ropes and palleys, the whole gang of plows are instantly raised from the ground and lot down agaín. <br> It drams als plown cultag a foot each, athached in a trame, and so regulated by spiral oprings that they yield to any extraordinary obstruction. As | there was no stabble fold near, it was concladed to make trial on the unbroken praitic. This was now baled so bad by droath, that the praifie breaking plows would not ron in it, and the trial of god plows was abandoned in consequence. Notwithatanding thls fact, the inventor wes eo confl, Nant of anccens, tha. he gave the order to pat the plows to work in this almost impervions sollAfter a llttle delay in regulating to this briok like sarface, the engioe moved forward, when sia forrows were torned side by side, in the most work. manlike manner. The excitement of the crowd wes begond control, and their shouts and wild bozzas eohoed far over the prairie, as there be. neath the smilling Autamn and, lay the first forrow tarned by ateam on the broad pralries of the mighty Weat. <br> The goal wes won. Steam had conquered the face of natare, and the Steam Plow had become a fact; it was working over the ricb, rolling prairies of "Eggph" and turaing up its wealth of natritious elemente for the growth of the cereal and pomonal prodacts-self-moving, and contajaing a power anequaled to turn up the lower strata of soll, so rich io potash, in phosphates, in silica and other essential elementa of vegetable grofyth. The long line of matchless farrowa parted the crowd, and lag between the moving masses like a line of silver wove in the gray wetting of the prairie. Amid the esciterrent the loventor remained calm; it was enough for hifm to hear the glad shouts of victory which rent the ofr-for this he had toilod-for this bis bands had become bardeaed, and his face made awarthy over the glowing iron, out of which ho forged the muscles of his iron ateed of the prairles Mr. FAWESE and others were called out by the crowd, and made brief speeohes. Mr. Colnuan, a member of the Board, apake of the success of the Steam Plow now witnessed, as marking a now ers in the world's progress, and deciared that the great enterphise of FATHEss, may be placed alde by side with the ateam engine, the atosmboat, the locomotive, the cotton gin, and the tolegraph. The engine again mosed forward, when the plowi taraed ap the loose mud drif? of Egypt, iaylag els farrowa alde-by-side, with the most perfect ease and in the most workmanllke manner. The conautuption of foel and water was verg moderato.That the engline is a complete succese, there can be no doubt, and sll that ia now wanting, is to demonatrate that, taklag the whole expense lato consideratlon, it is cheapar than horso-power. If this is angwered in the afirmatlve, it will produce the greatest revolation in agricaitaral progrees that we have yet seen; it will take another wriaklo from the brow of lebor, and give to the tolling millions lightes tasks to perform. <br> The inventor, in a recent note, sags:-"I know the good people of the Wert are in want of my invention, as mach as the people of the Old and New World were In want of Friton's invention. The time has come when animal power is not nufficient to perform the great work required by this clans Therefore, gentlemen, if God spares my life, it is my intention to devote my time and limited means to the apeedy perfection of steam engines adapted to the culdvation of the wide extended pralifea." <br> Tan Come Crop in Kgntucte. - The Loularlle Journal agys that the corn crop bas nevor been so large in Kentucky as the preseat orop promises to be. It atates that there are fileld in the blae gracs region estimated at one bundred and siventy.ave brabels to the aore, while fielda promising serenty. five to eighty bashela are quite common. |

\{WHOLJE NO. Xbl.

| hoore's RURAL NEW-YORKER, Agricultural, Literary and Fanily Fewspapcr. CONDUCTED BY D. D. T. MOORE. WHITH AN ABLE CORPS OF ASBISTANT EDTTORS, Tria Rovar Nkw-Yorkza fo dalmed to bo ubourneed to $\square$ $\square$ $\square$ $\qquad$ $\square$ <br>  <br> NOTES ON MANURES, \&c. <br> TaE following briof notea sare wrilten fa answer to imquiries recelved from correspondente. This willaccount for their miscellsoeong and somenhat disconvected character. We have selected inqus- rleq mainly on the sabjeot of Masures, dext nomber may give ainilar notes in anawor to ineace of any of our readers is sach as to cause thern to difer from oplaious expressed fa these or other artlelen, they can do the communlty of farmers no better serfioe than by glving the facts publtcity Liquid Manure. $\qquad$ manare is mapled, and it is alao trae that this is the most valoable f art of the excremente of animula <br> These two facts admitted, the necessity for a change is at once apparent In Holland not ouly is the liquid manare carefally preserved, but the polid manure is mized with water, and applted to the land ia a liquid form. Those who have experimented with liquid manure fo growing the vegebands of the skillfal gardener. Wo bave planted frult trees in full flower, and by the frequent and the conslant demand apon the trees, which the in Jured roots could not sapply unless it s b3 girea in this convenient form, have sacceeded in perfect ing a large crop of frait (more than enough to pay for the tree, the first year, and withont duing Soclety of Westarn Nery York, often tells his friends that the fineet, highest-colored and best flavored Duchesae de $\Delta$ ngou'cmo pears ho ever eaw or lated was a fow given him by un a few jcars blace. These were rafsed on trecs the firat yebr planted, which it is not likely woald have grown a perfect froit withont the use of liquid manare.of a'most fubulous size is ibe esme ranoner. Now, if this manure is so thefol in the hands of the gardoner, may it mot be of valoe to the farmer in spectifo cases, in forwardlag a tardy crop, in giv. Ing strength and vigor to the sickly or fetble plapts, just at the thme when the success or failare of the orop eeems to be hangiag ia the balance. $\Delta$ hogohead may be rigged on a cart or wangon, for app'sing the manare. For raving ft , the floors of the atalla may bo made to Incline to a drafn or gatter back of tho animala, "ith whicu a pipe must cellar, or some out butlding lower than the atablo floor. Liquid manure fa verystrong when collect- oifin tbis way and will need to be diluted with sbout foar times lits bulk with weler. It mbould be firat tested by wateriog a fom plante. Manare Collara, <br> Tbese are of advaatage to the manore, bat we anve often thouglt they were of no beneat to the animals ling and breathiog oper them. They are rery convenient too, aptiving can he more so, To have a hatok in the stablo floor through which all manure may be thrown sid all refase swept Ia very conrenient and iosares a clesa atalle. The liguid and the shote losea bat litte of fise raluable parta The question is whether those who bave not such a cellar cananot secare acarly the meme rounlt, by conposting with meterials that will prevent the escape of ammonis Fizere of Ammonia <br> We ay nothing aboat the acids or cults ned for this parpone, becanae they are not auch asmont farmers will be lizely to are. The end dealred they cab accouplinh beter by the ate of material al. wase on hand and that coota litute or notbing. Cbarconl daat th the rery teat thing for compoast Iog with masare, At leat nest to this io valae io scrapiag of roatio ra, are valusble. Leares make | a good manare, snd in answer to a particular io- quiry on thia point we will kay the antomn fa the best tume for ga'hering. <br> Manure Affected by the Feed. <br> It is not the kind of animas, so mouch as the bind of food it consulues that affecte the value of the sumare. Not mony jears siace, while attendSog the Annual Mecting of the N. X. State $\Delta$ grigence informed us that he bad commenced keeping and breedligs Durbam strolk, on accoant of the saloe of thelr manore over that prodaced by pa. tive slock, The diference in the manare, with the rame feed would burdly be perceptible. The ma- nare of fowls la of the bigheat valae, becaase they live on grain, insecte, to, all the richest kind of food. Ihe manare of the horee is more valuable than that of the cow, as nagully bept, becanse the horse consomes more graln than the cors. The me chanical condtlon of the manure affects the sesalt ble down like horse dung, aud therefore is not so guantity as well as the quality of fuod affects the value of the menure. If sn adimal recelves onls moflicient food barely to eastain life, this fued is much more thoroughly need up ia the animal or- ganlem, ond the manare wall bo less in quantity and poorer in quality than though enough was <br>  mal too, affects the quality of the manure. Food given to young anloula that are producing bones and muscle jo more completely consumed than That glven to those of matare age, and conse. quetty the menare is poorer. One thongand ynonds of the arine of e calf fed on millt was found to contain bat one pond of nolid matter, and only a trace of ammonia; the same quantity of orine ma'ter and eight pounda of uitrogen. This will mal aticta the masore. Soliling, Will it Pry? <br> This is a question whlch it is dificult to io which the inquirer is placed. Did we wish to ground we should cat their feed, by all meansThe reason the syatem has not been generaliy adopted In this conntry is, that land bas been oheap, and labor bcarce and dear, and it was thought best to allow animals to cat their own feed. This ides was sometimes carried to extremes Lo the Weat, as the hoge and catte were tarned into corn felds to pick their own corn. This we have never seen, bat me have some farmera whose go to the field and out a fuw arms fall of corn and throw them to the cathe. By suob a course the Whether sach s course was over the right one we very mach question. It certainly is not Dow, when land and cropa and animals are valuable. The rule now is to make the most of evergthing, and griadiog and cooking, feed, and soillig are mat- ters not only talked of bat practiced to some extent by the most intelligent fermera. In Earope Yetohes and Red Clover are grown for solling bat to sapercede corn. At the diecuesions at Syracase during the state Fair T. C. Pargrs, atated that he had grown Weatern corn for fodder and obtaineत This woold give a large amount of feed if cat green. Perhaps in no other way could as much be raised OD ad sore, $A$ gentleman inquired of the dairy. men present if they foand it proctaber ing gills corn in that way fur foddering or for soiling mil cowa To thls there was a most hearty and onanimoua responeso in the afimative. In fact no ques. tlon saked that evening recelved such a decided ansmer. This ebows the oplaions of praotical men on the queation on the question. <br> dors dnderdrainiwg pay? <br> Mr answer is, sometimes it does-sometlmes it does not. I figure ont my reesona thas:-Take an average speoimen of bard.pan land, or that which is cold and wet, with an average location, and Where syerage prices prevall; read an esass on ditohiog, work yourself ap to fever heat, sammon your cast, dive ditohes tbrough your whole farm two rods aparh three feet deep-if more than two rods apart, some of your land Ton't be drained, give righy rode of ditch to the sore, which will cost, goneralls, our fiffy cents to the rod whethes plousant oonjeotares as to the posable fallore of the ditches in time to come-and the account will atand: <br>  |  | 1. Red Acarua, <br> 3. Ixodea, (Wood Tiels) <br> 4. Acarus Scabif, (the Itoh Insect.) <br> 5. Lotato Fievil, $(a, b, c$. <br> tillage is to be good-8e bad tilloge, even on drained land, will not pay for the expenses incarred. There is one thiog that the ultra advocates of ditching sbould hear in mind. We have a large portlon of spouty, hard pan land, which, when thoronghly dralued, at the expeuse of fifty dollars an acre, will then be second, thard, fourth and fifth rate land, and will not bring the cost of drainage, though exposed for zale in every market in Christendom! I em not willing that the orners should be decosed by the eloquence of our modern lectarers sid esabyists into the expense of drafing It I havo obacrved that whenever the editora of the Tritume, Country Gentleman, Roral, Boston Cultaator, dic., do, make ppeeches or write articles, sud have nothing to say, they at once hinge apon ditching, and each tine they rum the thing further into the ground White I admit that bome ditched, I hold that at preeent it lo not profitable to drain our grass lands, as a geveral role,-properly btocked and managed they will sopply our necessitlas and the neceatities of the coaniry without. <br> In reference to "the llest" it may te remarked, that back from its large towns, there con be little "Ou? W'est." I may judge, fecm what I bave aeen and beard, that a man bad botter take up a new and dry farm than to undertake to drain a wet one. He can buytwo dry oner fur what it will cost to underdrain one wet one-Ia 日hort, the "progress of popatation" does not yet requite the cultare of inferior lande. <br> Finally, I concede that In the Iadefintte fature, it Fill happen that nll tenaclous solla will be protitably maderdrained.-EI. T. B. <br> POTATO INSECT-HENDERSON'S THEORY. <br> [ame inlehtrationg abovg] <br> Eds Reral:-Wbile I admire the zeal of Mr. Cenderson and woald by no meane join in with the "wholeasle depouncement" of which he complains, I cannot avold noticiog his commonication in the Rusal. of the Fth inat. He thereio refers to Mr. Ratavos's letter, sent with my commanichtion, and fond in the Reral of Auguet 2lat, as a "ommplete anawer"-becsuse Mr. R ayys that the "Phytocorus lineolaris, of 84 , approsches nearly to the P. pratensis, foreign specjes, wbloh also has the V mark on the soatellam." <br> Thie certainly hes no bearing whatever on the question at isare. Mr. R distinctly dissenta from Ir. H. B theory of thelr early propagatios, becaase be asya "It Is Impossible that thes aboold cohabit in ten daya after their expalaion from the egg, anless they should bave, within that time, passed throagh all sheir transformatione, and have attained their matare or perfeot atase." Mr. Bendegeson aserts that he has "again and again seen the young insecte coblabling, bat never the foll grown." So stands the cane hetween those parties. Ido say that I have seen the wiaged male Aphid in connection with miogless fomalo one-so iate in the semon as Nov. 20th. This is also contrary to Mr. Harris' bellef-as to the Phytocorum I neither ss. sert nordeny. Mr. Ratayo | IS TO THE POTATO. <br> 6. Plyypocorus <br> - Aplifide, $(a, b, c)$ <br> Potato Bug (Leren Bog. <br> 10. Pasalun Cormutus. <br> "larva state," that "their habits then are almillar to the matare insect"-by this he alraply means as regards their feeding bnd form, excepting the wiogs and propagation only, snd to be otherwise construed would be to make him flatly contradict himself. Mr. Hendzreon, bowever, quotee it as bearing him oot in his statement. <br> What indeces me to receive Mr. Henderbon's slatement doabtfully is the fact that he quoles part of Mr. Sube's parsgraph 246, where he alas "e very gmall ineeot which is constantly to be seen <br>  is flgured by Mr. Ingall, who also remarke, as quo ted in the same paragraph-" that thls little fellow When viewed under the microncope traveliag mind of a great rbinoceros trosting about in a jongle." Mr. Hendzeron engs of this anme Acurus, "Now, this is precisely the young Plyytocorist mated dem drop," and declarea that be has watched thla lasect from the time it first mado fts appers. ance until it got fte winga! Fig. 1 is a copy from SMEE'S red trarus, which preyb upon ephide, and to therefore a friend to the horticultarlst. Fig. $2_{3}$ the Acamus farince of Suze, Which he found aban- dantly on the diseased potatoes, and is the one fig. ored by Mr, Irgall These you obeerve, are efght footed creatares and are clasaed among the Arachnidans or ayider family. Under the name of Afies theg are agiverally known, and whon mome of our mort essental articles of food, as obocso or flour, get old or masty, they soon gwarm with these minate mieroacopic animale; and when once established maltigly beyond conceptlon They not only attack decaying matter bot also Ilviag oreatores. <br> The immediate cause of the Itch, Is now arcer. tained beyond a cavil to be the presence of un lnsect called the Acarts Scaba found, not in the froall redigh farrow, wbich leging wlth the venlole and eads with white, corpasclo-Hke acarus. Fig, 4 shows the apper and lower blde of the Acarus Acabii. Varlous apecies of beetlea and other iasects and animals in the afr and waterand on land are infested by one or another species of thlsex. tensive groap of paraltle oreatures. <br> The red spider of oor hot bouses, is the Acarus talarius. Under the name of Ticke (Ixoden) they at tack dogs or persone, and ere annoging to thome col. leoting blackberriea in the wooda Doctor Mossm. zEY of Mount Joy, brought me a spectes of wood tick ( $\mathrm{FJg} .3_{3}$ ) thene from the arm of a amall gird, half imbedded in the lieal while aleeplog ondera sbade tree pear a wood. These Agarea are all more or less enlarged. <br> Certalnly, Mr. Hendersox doea not mean what he asya. That the aceras gets Finge and becomes tranaformed into a Phytocorla. This leade me to recelve his teatimoay with doabs as to the nccara- of of his judgment and of conre wonld not wil. fuly ha juggenert, and of courno whid not wh more delaite if hla article bas mibled me. <br> If mey be well to remark thet there are quite a number of insecta socased of IpJorigg the potato vimen. Whet is commonity called the Potatofy, |

 prematare freezing before cottiog, or want ifknowleftgand skill in the process of mannfac.
ture,) it was an entire failare, oo far as making
eyrup was concerned. I fed oat the remainder to
 an acre, same time, (Mras 25 th, as corb, and same
distance apart (foor feet-I thiok four feet one way any byrap, I did not strip ofl the leaves or tak selected 4,300 of the largest canes, from which Mr.
Hzamax Robsing, of Pepfitld, manafactared forty.
three gallons of ayrap as per ample sent here.
with, which is thought the equal to Witb, which is thought to be equal to maple roolas
see in fivoror, and for cooking, every wryy maperio
This gives an average of 100 cance to This gives an average of 100 canes to a galion
and 344 gallons per acre. If the emailer cane
had been ground, or had the cane been plante been greater. Protably 400 gallons per acre
would not be too higg an estimate upon good
land, with good coltare. Some of the seed was
apparently well matured. The cost of caltivation is no greater than that
of corn, and the leaves and sackere, if removed in
season, will nearly pay in fodder the whole cobs of
cuitlpalion. The princlpal expense just tow is the manafacto
the syrap,
speak with gellons, which, at four bblliog whll prodace 300 expebse of converting into syrap may be $\$ 50$, or
one third nows, (it will be lesa beresfer,) and $\$ 100$ per acre may be assamed es the product, and near-
ly all profit, too, of an acre, with leas labor than
almost any other crop. Plesse bear in mind that I am rebsoning on
the masic one of which, viz, the twenty gallo in my cellar, is pat to a daily test, which has
amay with all previous slepticlam on my par with my own experience as a basis, I believe it
will soon becomen an artiole of general cultivation,
 can, if the soil ls sdapted to tt , raise syyrap enf.
ficlent for the supply of an ordizary sized family. It is a atrong argoment also sgalmet the coltiva. thon of tobacco, that the amme land will prodace
an article of general necessity and agreeable flavor profit As a mater of pabllo or political economy,
advantagea are too erident to need mention no It might be well enough to saggeat, however, thone oratore who made suoh powerfal pleas for
the prospective beneite of the "Great Cable," that this is a master
farner and machanic Bs well ss the merchant; and
shoold the orator aforesaid take the stomp and
labor for it an for the woceess of the sald cable,
and ahould all finterested tako hold of
in earnest, if there were no processlons matter
brations in ta honor, we migat be able, by tho
time L. MAUSY hears the ticklog of the clook in

GLEANINGS.-NO. IV.

| "I want you to underscand, Winste"-and my motber thratt her bonneted heal in at the door " 1 want gou to auderatand that the bread is in th oven." |
| :---: |
|  |  |
|  |  |
|  |
|  |

| What hare I to do with the bread's being in the oven? I am perfectly willugg it sboald remai there." |
| :---: |
|  |  |
|  |  |
|  |  |

People hurry, and waojen, the truth that there tig "no work, nor dorice
nor suowled ge in the grave" whither they are fashastening? I wot not For, if it were so, thoy
would have thoogt less of secalar affilt, andDever belleved in lifiling a life of idenenea, bat $I$ dnooiable,
har hao
would be

have a regular game of romps with the olifldron-

 abe hae. No need of it, whatever. A mere eleap to domestic drudgery. All nseless. I would car lens for "crestare comfort"" and be more mindfal of the rools of my family. I woold not cook to
mooh if I were her. I would have lishor, food and fewor dlshes. Perhaps busbend woold

| him that It was for bis good as well as m my from belief that what people ent, their thoughts and actlons. Yee, there obort, unkiud word concealed in that crust-many a gloomy, weary feeling imb masees of calse and floatiug in highls dishes. <br> Thed, my domestic osres ao mach lig would devote more time to husband and 1 wonld have an interesting book on h after supper, whtie he reclined on the aof read eloud to him, wooing his thoughts a labor and care. I would tell the childre juat suob stories as I loved to hear whe chld, and I would teach them of Heaven, out the way. In a short time I think Mecu rould be applying to the Legislat change of name. <br> Mamma at the door! Indigration an resting on her face-and a tin in each h Fith the blackened rains of that bread. you would burn it, Win - I felt sate of now what shall I do?" <br> Dear me' if I had not been minding of Mr. and Mrs. Cabe Muce, I might have bered my own. However, if it does good I shall not care for one baking of 1 Rocleater, Nor. 1858. |

| Writen for Mcoro's Rutal Nom-Yorker <br> ELDER BROTHER |

| Eldsr Brotaer! Is there in ady langrage another name, besides the matchless one of "Mother," so hallowed as this? It expresses more than father, sister, child, and even more than busband, or wife. A father is something to be estermed and reverenced; a sister is the kind playmate of four ohildhood, and the loving aympathizer in after yeare, bot her voman's noture, 日o like yoar own, preclades the possibllity of great varlety in tastes and emotione. A wife is to be loved, fondled, and protected; concerning a hus-band-although you may love and respect him, and though you make his intereats your own, you feel be is an part of your real self-noдo of the blood of gear loved family courses throagh his veigs, and the notural impulses of the heart are not the same. To a fimale there oan be no relation so dear, so pure, as that of brother. He is fond and proul of his sister; for her he will folego pare privaleges, and endare more bardabips than even the interesta of self roould iadace him to do. Thit is trae of a brother, bat elder brother-how infinitely above all this! Brother is a sweet word, foll of melody to every sister's ear, bat "elder brother" is most peculiarly and emphatically so. For thls reason, when Cerist graciously stgled himself our great Elder Brother, he allowed us to bestow apon him a dearer appellation than even "Abla, Father." |
| :---: |angry words, or baghty treatment? Oh, nol it

brings up naught bot the most pleasing recollec-
toos, In childood, your "elder brother" ever
gave you the pretther tog-lie led you over the
